**Subject:** RE: fish ponds need oxygen meter, and clean water. Report of dead fish

The call center told him to call EPA since it was private property. He is getting the runaround, so I would like to get a better contact for him tomorrow am. Can you help me out?

Thanks!

Hi, Craig.

I just spoke with a gentlemen that has 7 fish ponds on his property. Two have been contaminated, and in the rest, he has been moving water from one pond to another to keep them aerated. He said he needs an oxygen meter and some clean water for his ponds. Dan Wall said that you had provided a generator to another location, and perhaps that would be appropriate here, too.

In addition, he reported that he had seen at least 10-12 dead fish in the Animas Consolidated Canal.

Please let me know if you can assist him or direct me to the correct person.

Thanks!

Cynthia
